

RUSH Sportswear — US Sales Analysis Project

August 2026

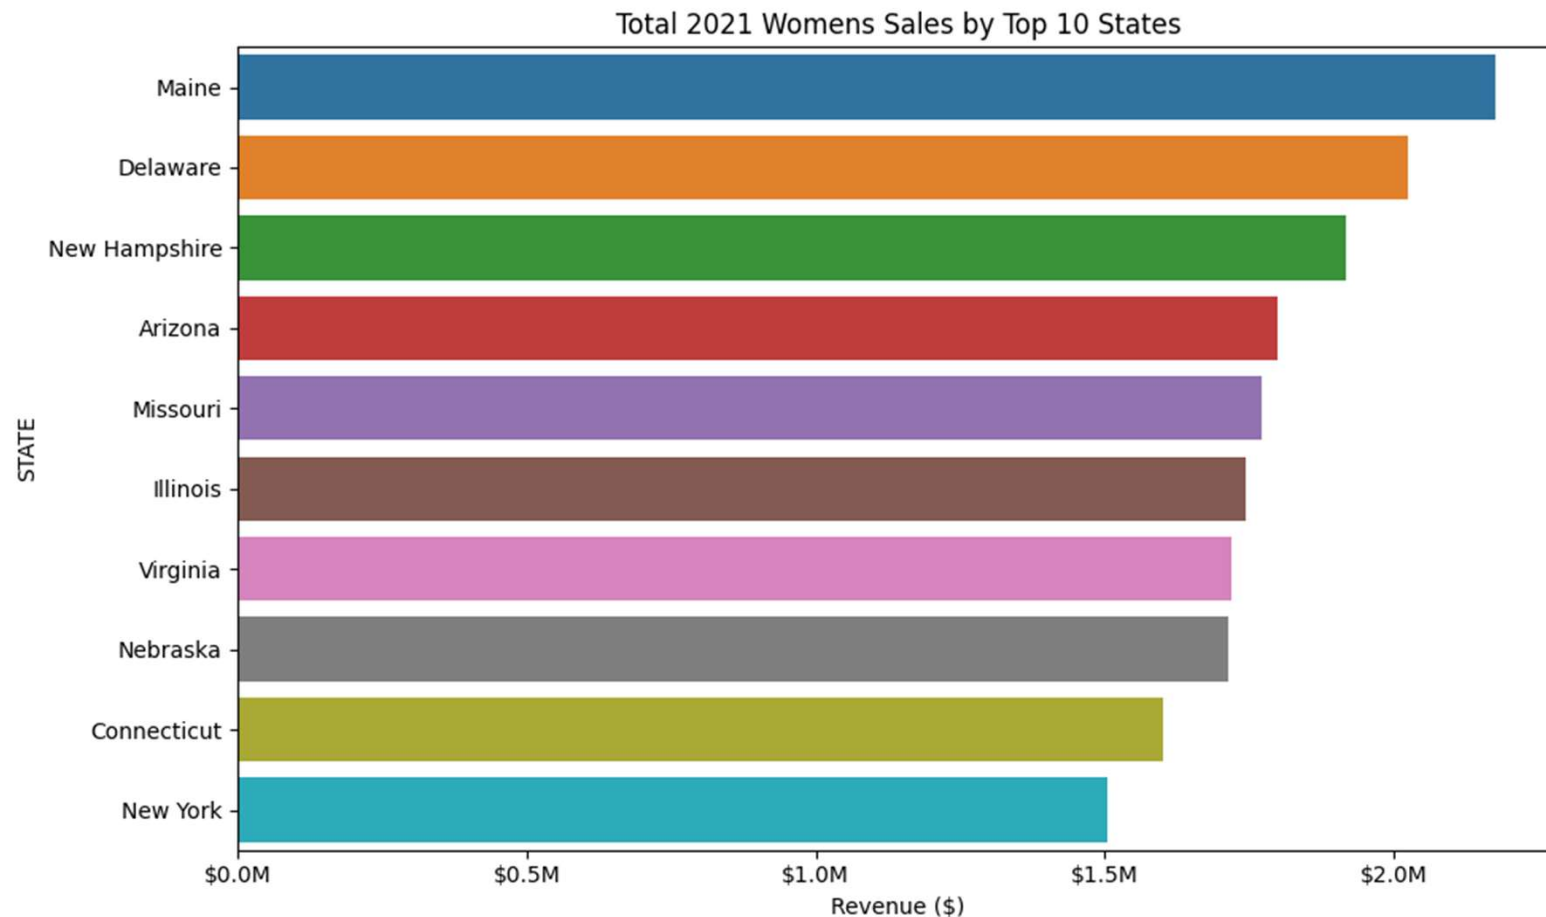

Highest sold category in 2021 by Product Category

- Footwear is the primary category for Rush Apparel with Men's Street Footwear being the number one category
- Men's apparel accounts for more sales than women's product
- This may be due to their marketing or intentional of being a footwear first business

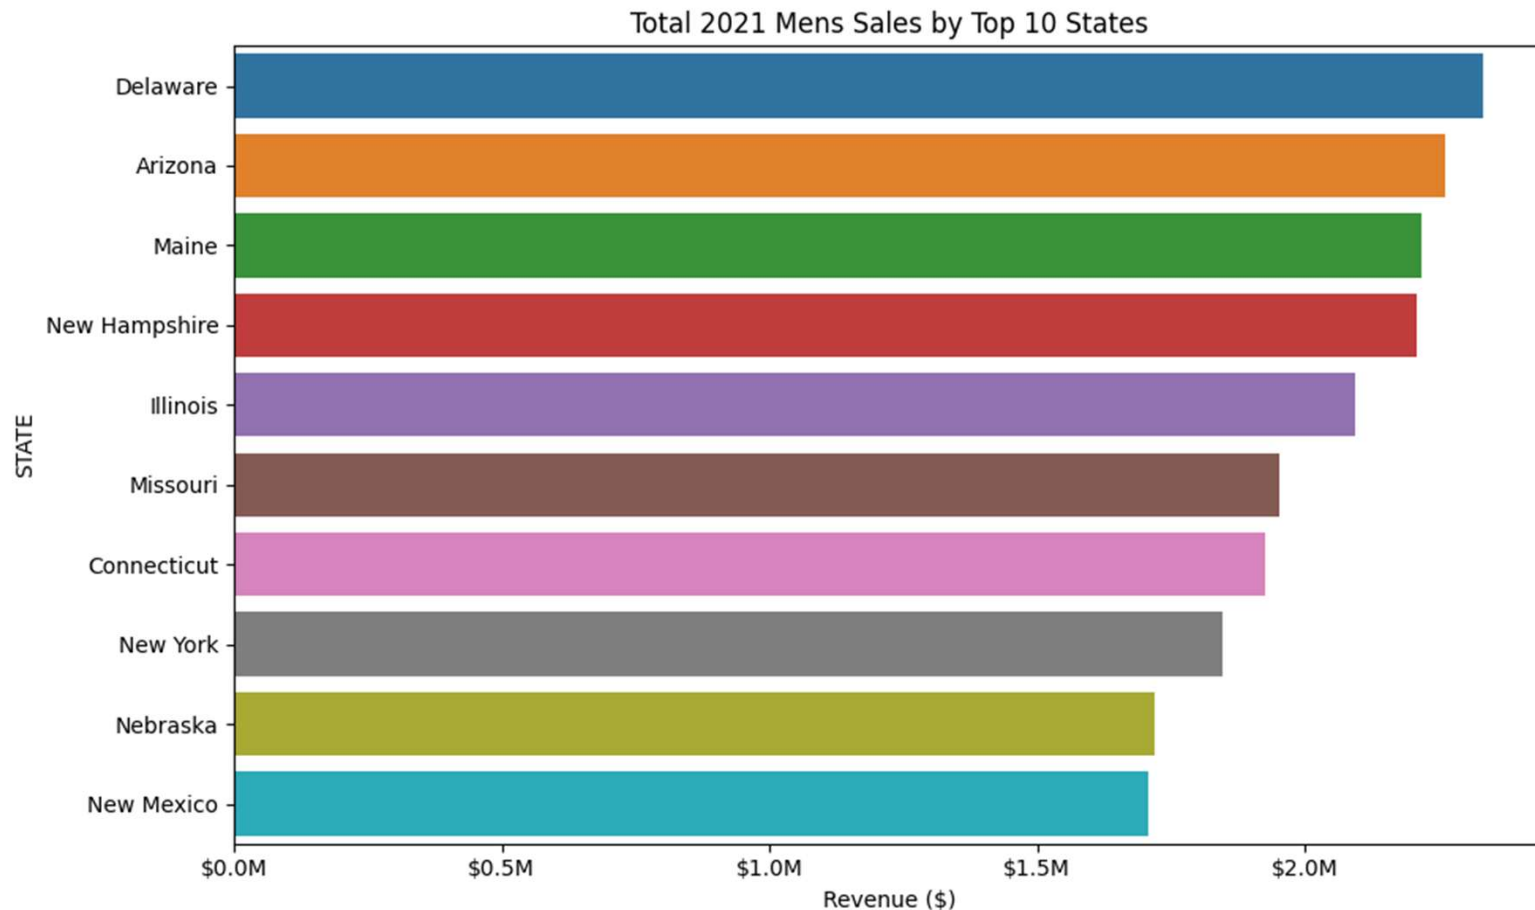

States with most sales in 2021 specific to women's product

- Maine is the state with the most womens product sales
- The Northeast would be the region with the most sales with over half of the top 10 being in the Northeast
- It likely would be worth advertising more in other areas specifically California with that being a large population area that is currently missed.

States with most sales in 2021 specific to women's product

- Delaware is the state with the most men's product sales.
- Men's product seems to be a bit more geographically spread out but the Northeast still has a large representation.
- California also does not show up in the top 10 for men's product and does show up as having some sales in the data so since we CAN sell here, we should certainly spend more effort capturing this population center.

Top retailers by year of data

- In 2020 our top retailer was amazon followed by kohls and west gear.
- In 2021, our sales took off once we were able to get product into Foot Locker which makes sense as footwear is clearly our focus.
- This points toward continuing to get into footwear focused stores.
